Application

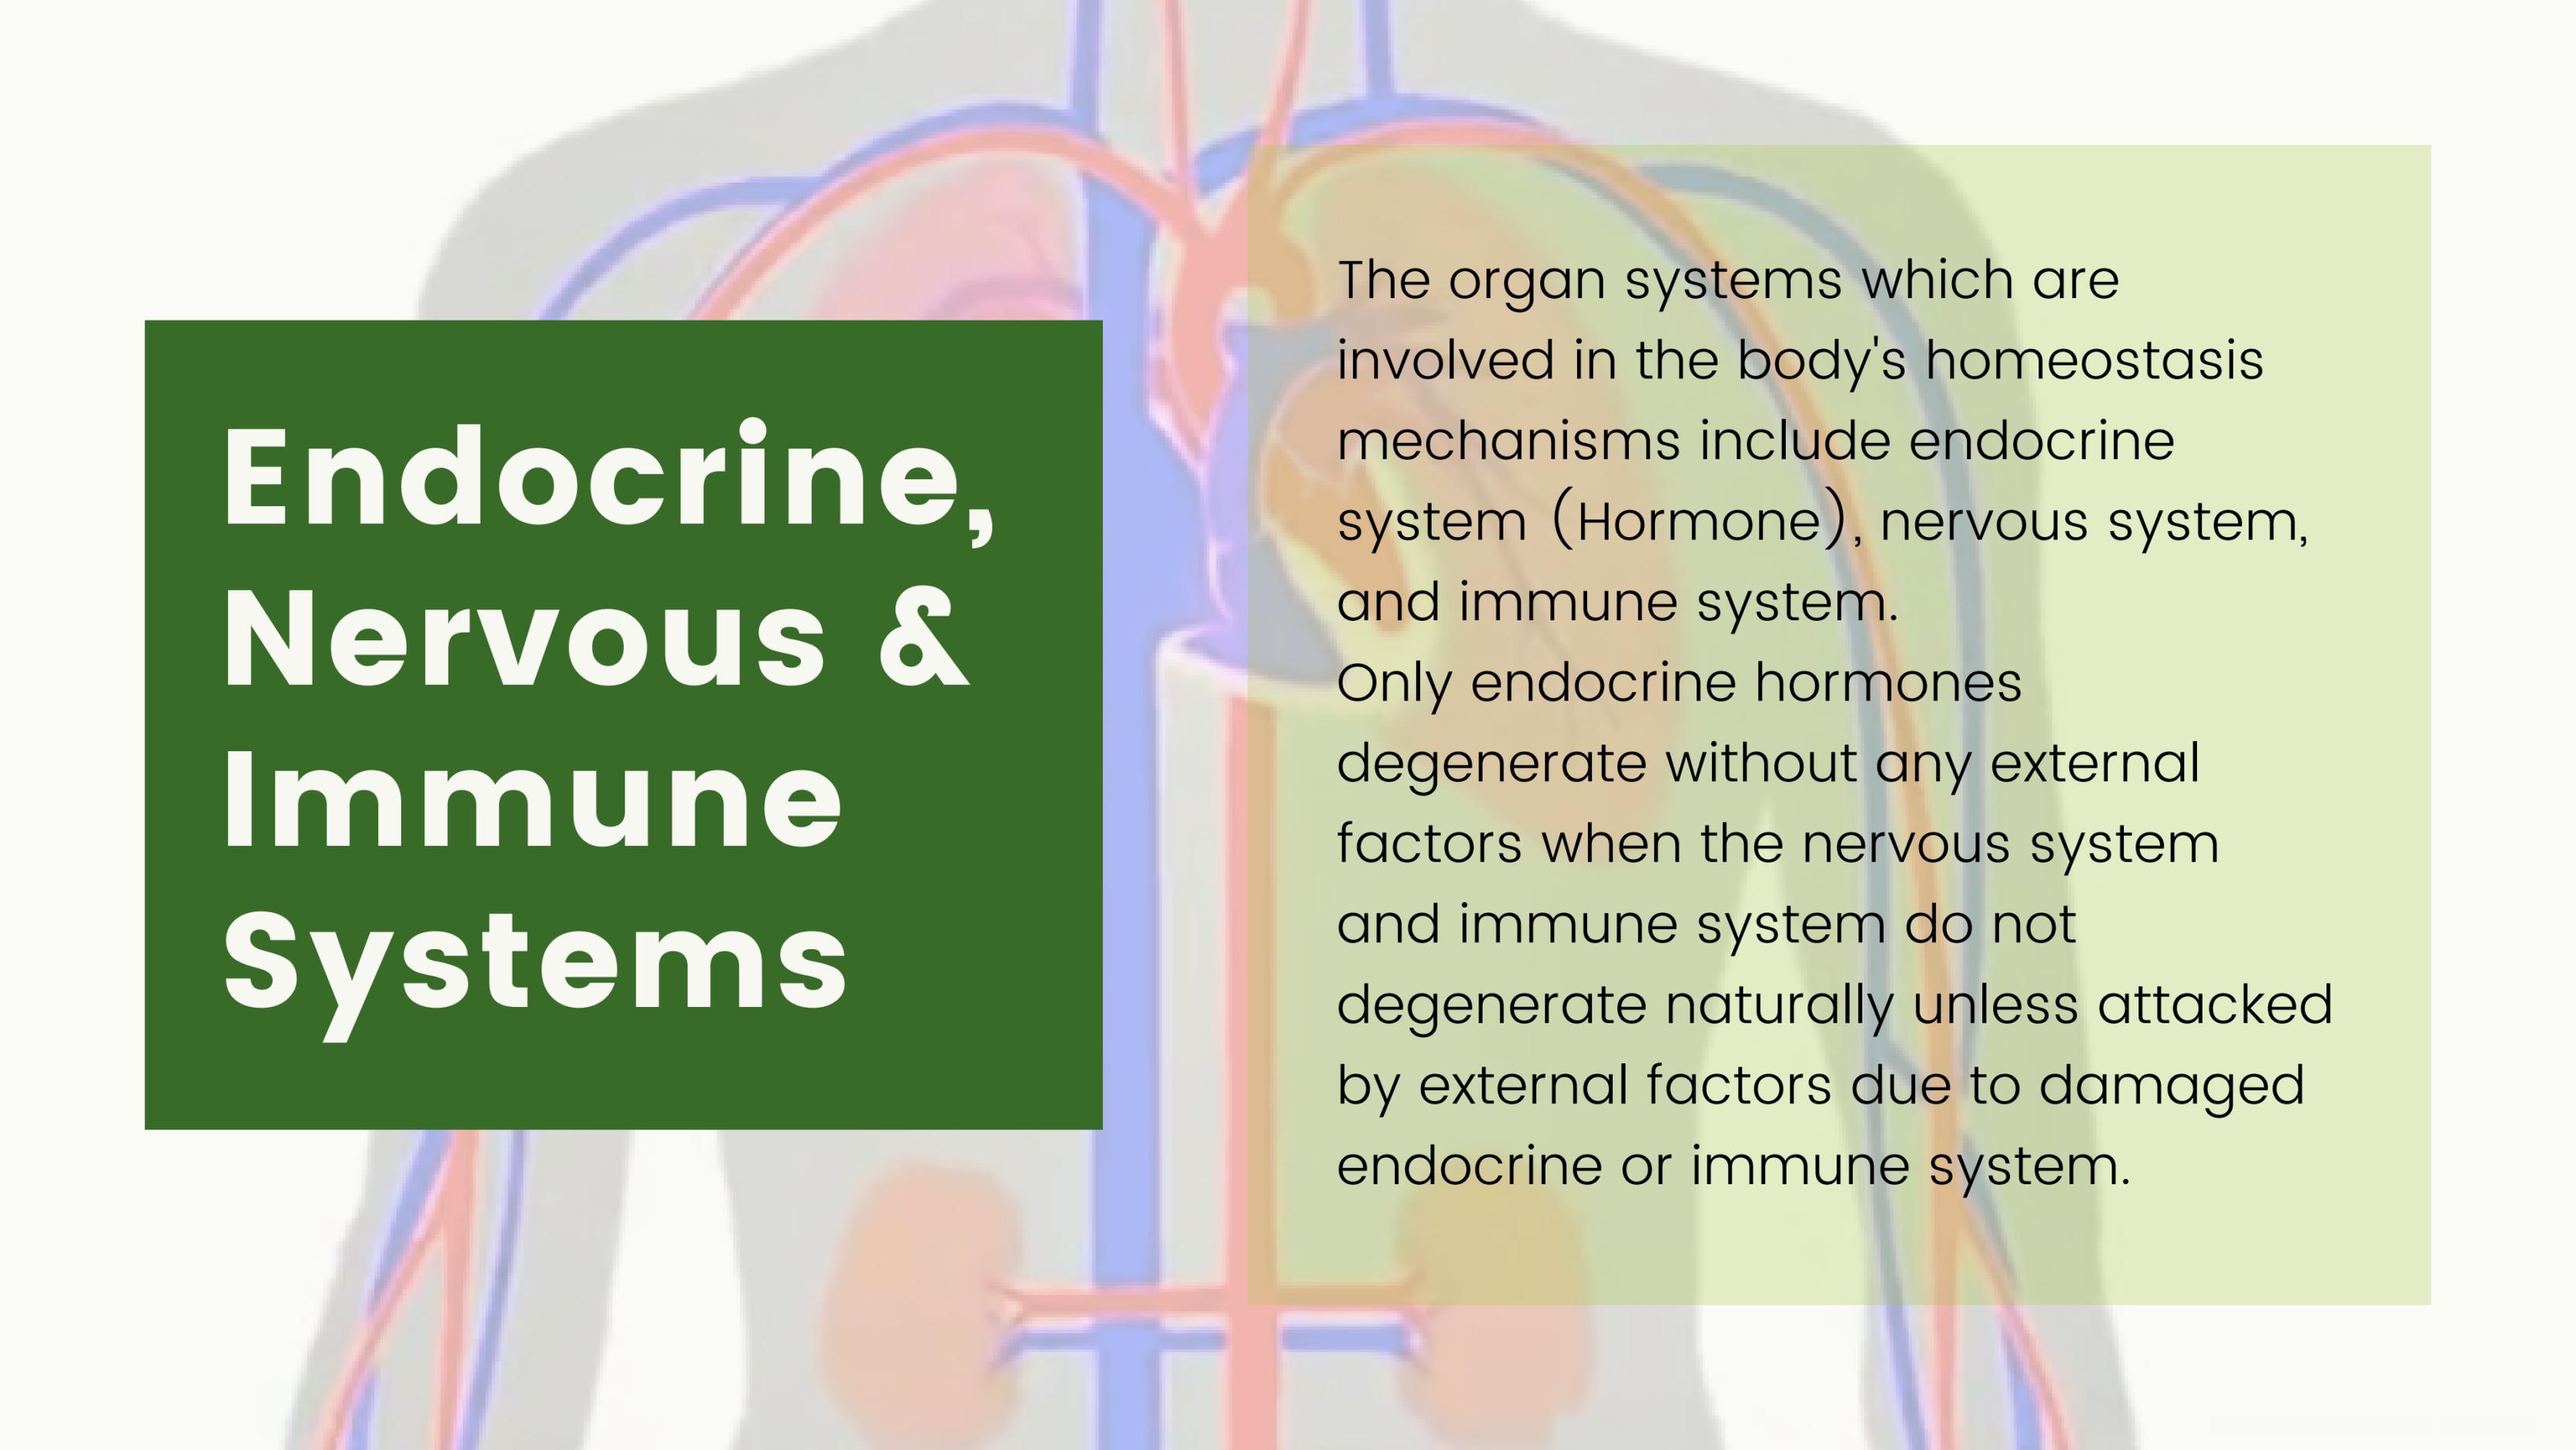

**SUPER CREAM
229**

What are Hormones?

Hormones are an integrated regulator of our body that maintains homeostasis, mediating responses to external stimuli, and controlling growth, production, and reproduction.

In simple words, hormones play a significantly important role in balancing the imbalance which occurs in parts of our body.

An anatomical diagram of the human endocrine and nervous systems. The background shows a stylized human figure with various organs and systems highlighted in different colors: the brain and spinal cord in blue, the heart and major blood vessels in red, and the kidneys in orange. The text is overlaid on this diagram.

Endocrine, Nervous & Immune Systems

The organ systems which are involved in the body's homeostasis mechanisms include endocrine system (Hormone), nervous system, and immune system.

Only endocrine hormones degenerate without any external factors when the nervous system and immune system do not degenerate naturally unless attacked by external factors due to damaged endocrine or immune system.

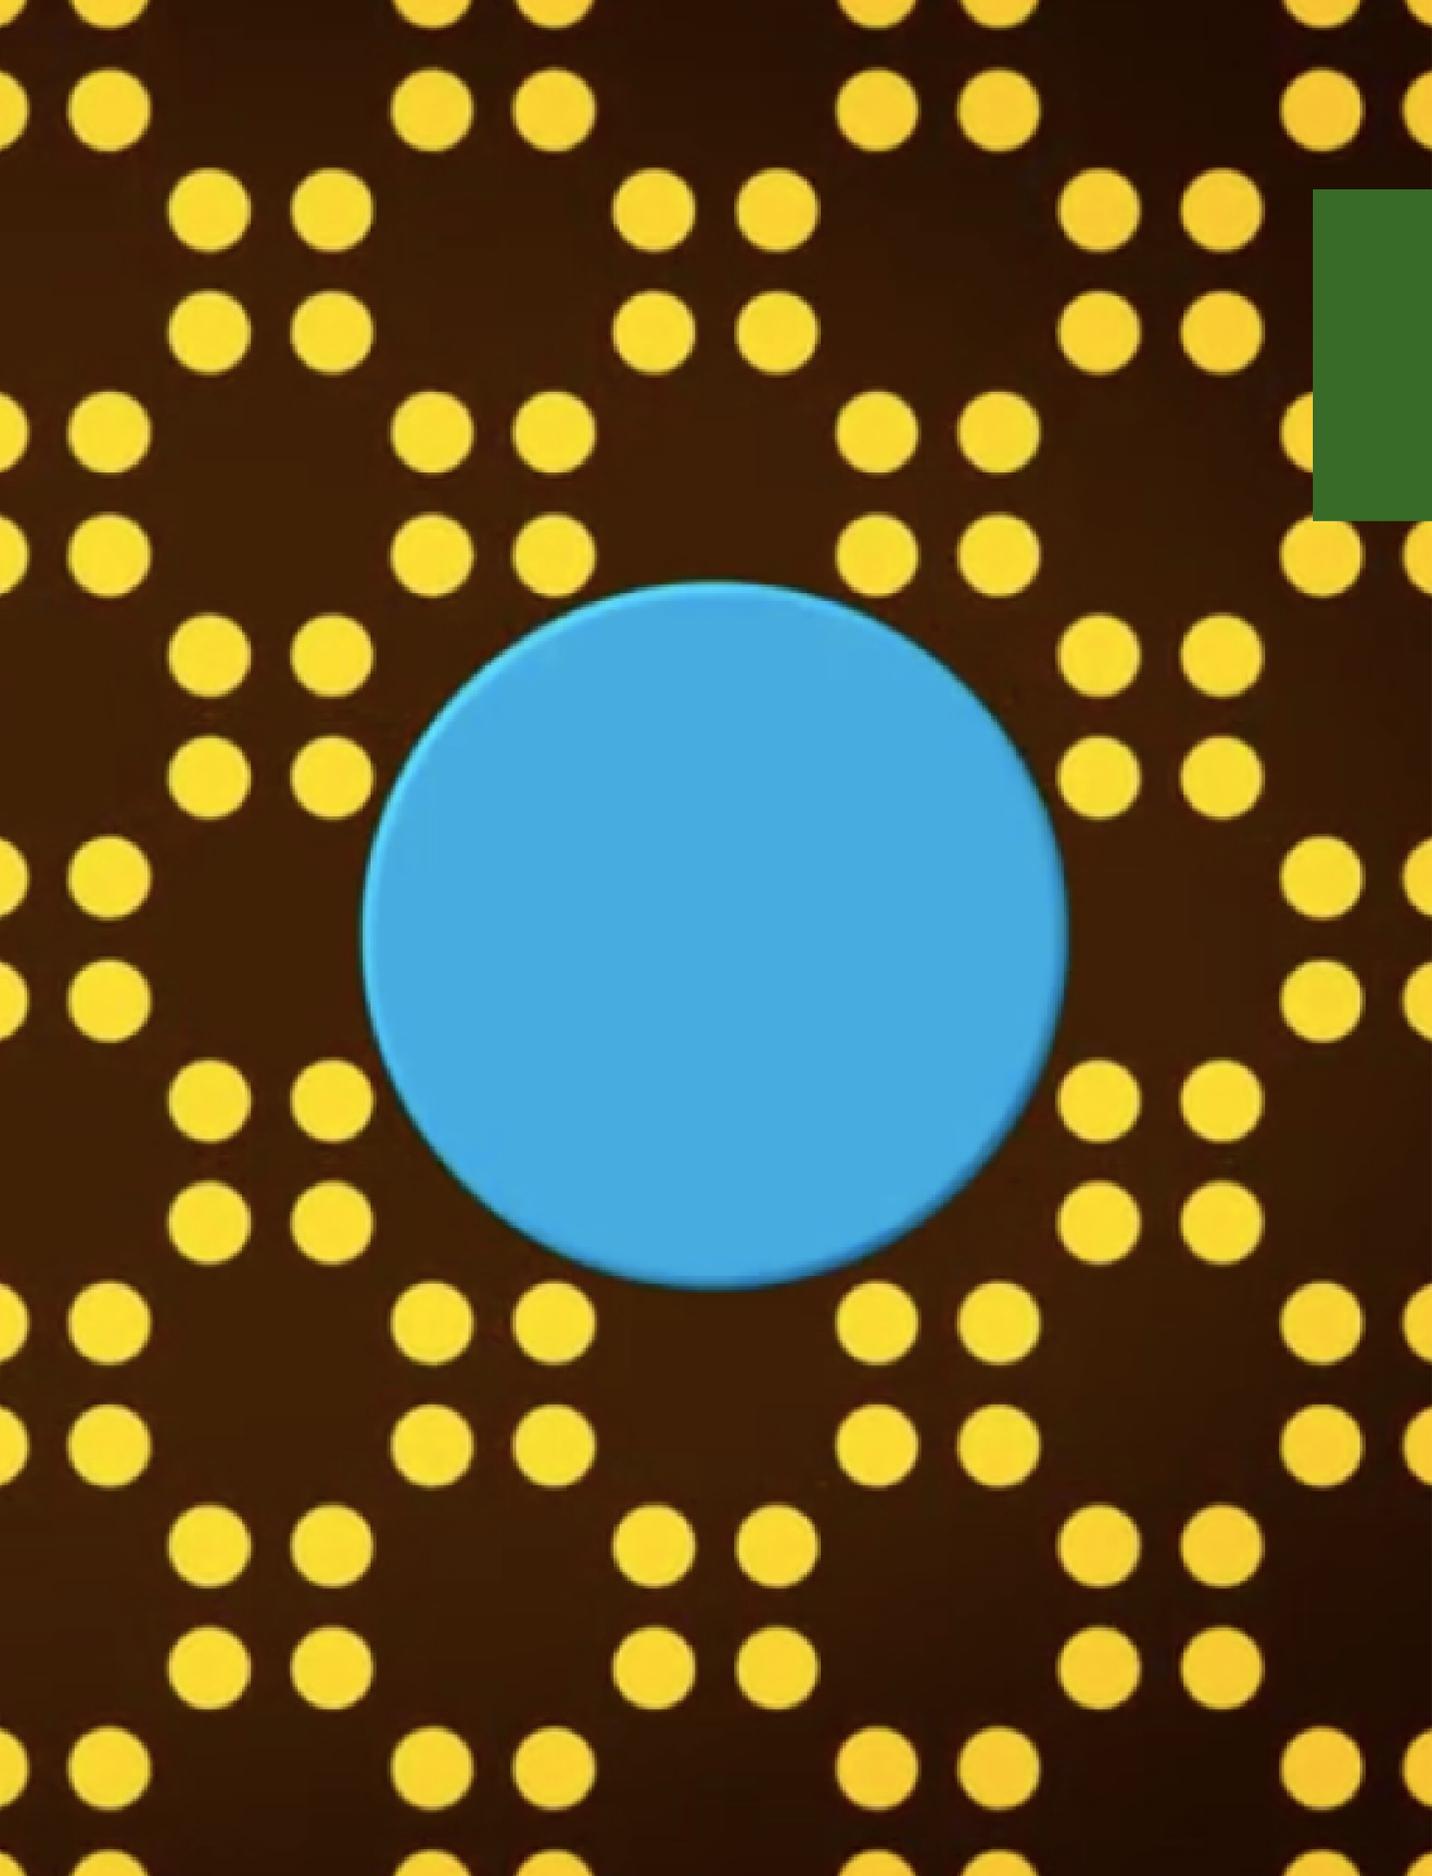

Lymphatic System & Hormones

A generic lymphatic system is located under our skin, and it produces lymphocytes and sends waste materials and hormones through lymphatic vessels.

Lymphocytes are gathered in about 600 lymph nodes in our body and intermediately store waste and hormones there before sending them to the blood through the heart.

Therefore, hormones which are absorbed into our body through lymph nodes are delivered to organs through lymphatic fluid and blood in order to provide the basic need for normal metabolic activity.

ENZYMES & HORMONES

Energy is needed for chemical reactions to synthesize or decompose substances. If there is a catalyst such as enzymes, it can quickly induce a chemical reaction with less energy.

However, since hormones manages and controls enzymes, enzymes decrease with age as hormones decrease with age. Without hormones, no matter how good we eat, we cannot make the right nutrients that our body needs.

Diseases & Hormones

Hormones can be one of the most direct causes of diseases. Hormones obtain necessary information from cells while traveling around the whole body along the bloodstream, regulating the metabolism of substances or energy in any part of the body. They exist at a constant concentration in our body, and control physiological functions with a tiny amount. Thus, lacking or superabundance of a certain hormone can cause physiological imbalance and put our body at risk due to hormone deficiency or hyperactivity.

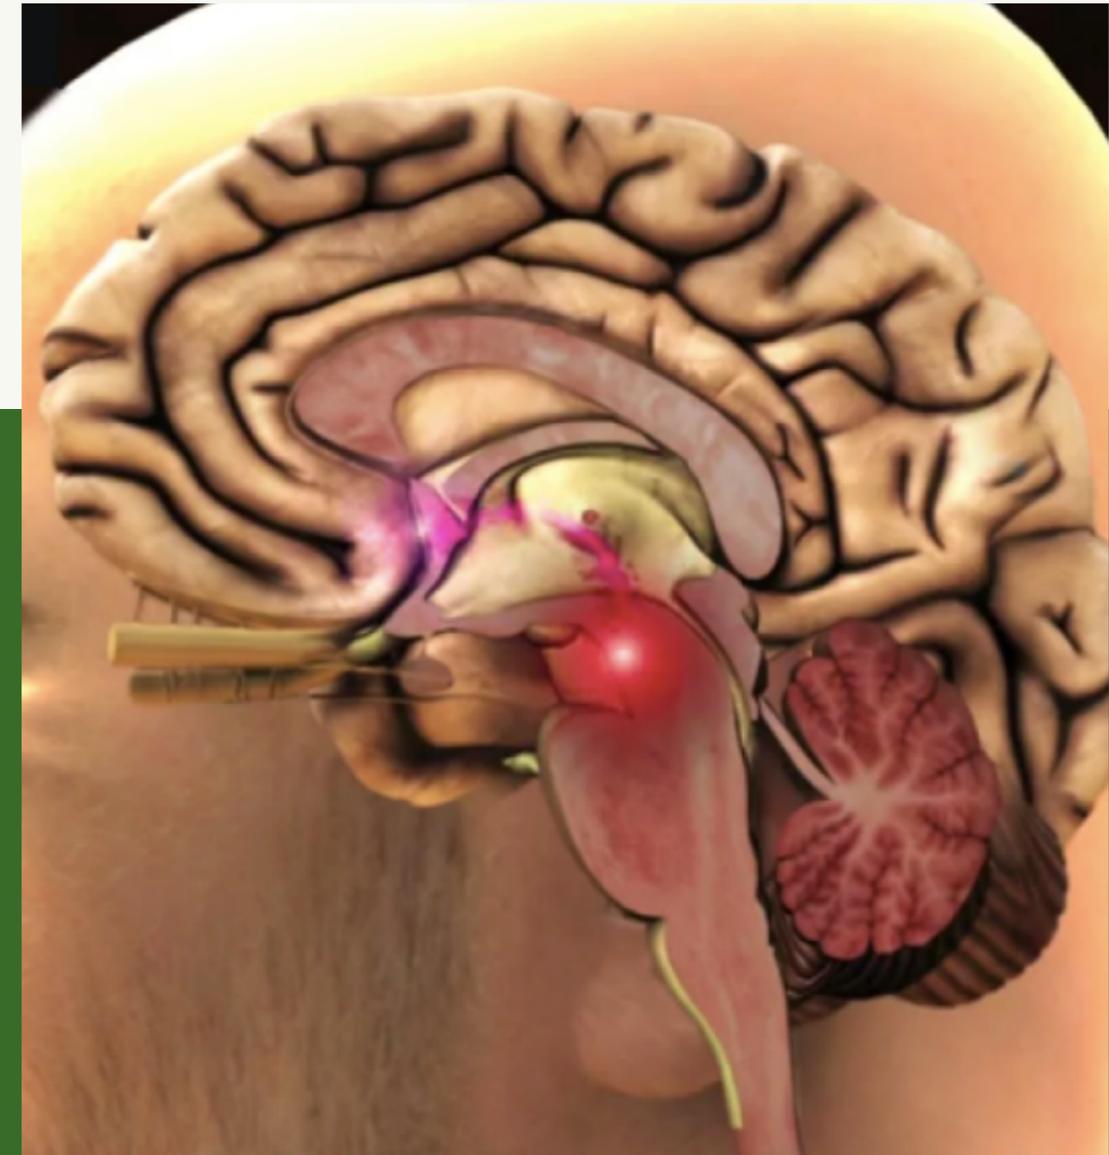

The control of these hormones is slower than the nervous system, but they last long and extensively contribute to our physiology such as growth and development. Thus, most of metabolic diseases are caused by hormonal abnormalities.

70% loss in 60s

Anyone in their 30s starts to lose secretion of hormones, and they lose about 70% in their 60s.

90% loss in 80s

About 90% of secretion of hormones are lost in their 80s.

SUPER CREAM 229

SO HOW SHOULD WE REPLENISH THE HORMONES THAT ARE LACKING?

SUPER CREAM 229 is a highly effective, strategic solution to our health that can improve problems associated with metabolic abnormalities in the human body.

Super Cream 229

100% NATURAL

It is made of 100% natural ingredients that are concentrated, highly effective, and absorptive plant-derived.

COMPREHENSIVE CREAM

It provides essential hormones through skin absorption, normalizing hormone levels and preventing early aging.

FDA NDC

The U.S FDA registration guarantees its safety.

NATURAL

Consists of shea butter, coconut oil, avocado oil, jojoba oil, and more.

STRENGTHEN

Applying "SUPER CREAM 229" for more than three months results in an overall strengthening of cardiovascular and digestive organs.

BLOOD PRESSURE

By maintaining the homeostasis of the body, it normalizes blood sugar and blood pressure and prevents stroke by purifying blood

FEATURES

FEATURES

BONE & MUSCLE

As enzymes become more active, nutrients are evenly transmitted to bone cells, increasing bone density, muscle strength, and muscle mass.

METABOLIC ABNORMALITY

By normalizing the endocrine system, the symptoms that are caused by metabolic abnormalities may be improved within 6 months.

ENERGY BOOSTING

The symptoms of chronic fatigue and energy loss that older people feel can be improved quickly. Their memory and immunity can be improved notably.

Efficacies

The following images are changes observed from using "SUPER CREAM 229" in months.

Within 6 to 12 months, people in their 50s and older experience significant improvement in their appearance such as wrinkles, blemishes, and lackluster skins.

Efficacies

You can also find dramatic improvement on your neck wrinkles and rough hands.

Efficacies

For men, they may experience their body becoming more muscular.

Efficacies

before

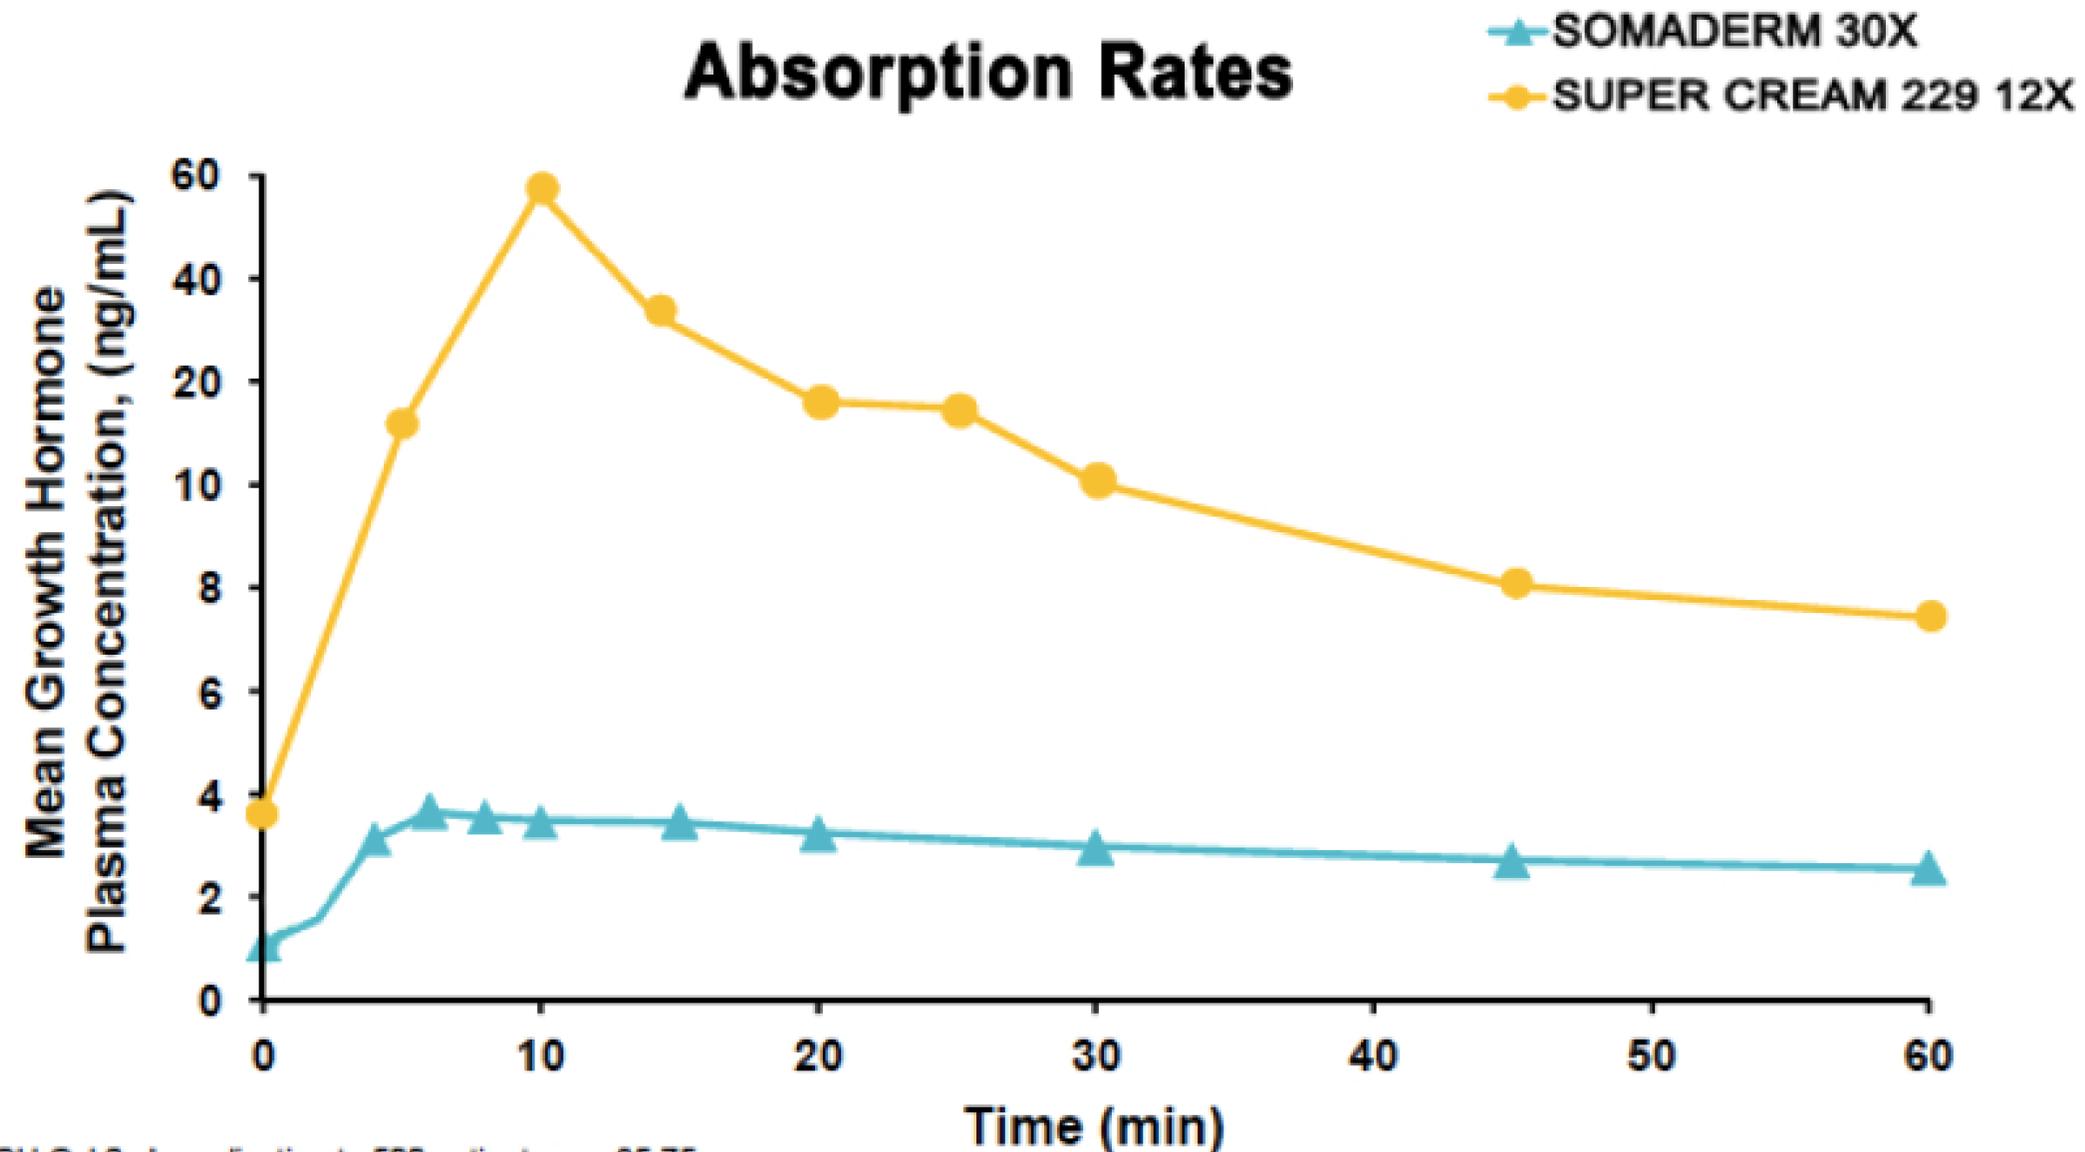

after

As you can see in the picture, you may also see improvements on grey hair and healthy hair growth on scalp after using Super Cream 229.

Super Cream 229

2ml Application to 500 Patients Age 35-75

Transdermal HGH Gel 2mL application to 500 patients age 35-75

APPLICATION

Apply in the morning and evening for 5 days and rest for 2 days.

APPLICATION SITES*

Apply to wrists, armpits, under the neck and ears, groin, forearms, and behind the knees. Application sites should be rotated.

FACE

Apply after facial wash. Wait at least 20 minutes to dry before applying other products to the same area.

How to Apply Super Cream 229

*Because hormones are stored in fat tissues, it is ideal to absorb it into thin skin and other areas where blood vessels are concentrated.

APPLICATION & LOCATIONS

All for Your Wellness.

If you lose your health, you lose everything. For this reason, you should have plans for your health. The very first step to your wellness is to replenish the lacking hormone. With "SUPER CREAM 229", you can take control of your health. So start now, for your wellness.
